Summary

M.S. Computer Science student at Georgia Tech with industry experience building LLM-powered systems and distributed data infrastructure at Okta and computer vision research at IIT Madras. IEEE-published in NLP, with a background that spans applied ML, big data systems, cloud architecture, and agentic AI workflows.

Education

Georgia Institute of Technology — Atlanta, GA
M.S. in Computer Science — *Incoming student – Fall 2026*

Vellore Institute of Technology — Vellore, India
B.Tech in Computer Science Engineering | *CGPA:* ***9.60/10*** — *Sep 2021 – May 2025*

Technical Skills

Languages: Python, Java, C++, C, JavaScript, HTML, CSS
Frameworks: FastAPI, Flask, PyTorch, TensorFlow, LangChain, LangGraph, Dash
Cloud, Messaging & Databases: Apache Kafka, AWS SQS, GCP Pub/Sub, Amazon Kinesis, Redis, Pinecone, ChromaDB
Tools: Git, Docker, REST APIs, Multi-GPU Training
Areas: Distributed Systems, Big Data, Cloud Infrastructure, LLMs, NLP, Computer Vision, RAG

Experience

Okta | *SDE I, Data Platforms* — *Aug 2025 – Present* | Bengaluru, India
- Designed and delivered a cross-cloud service-to-service messaging feature (AWS SQS, GCP Pub/Sub) as a new delivery type across the event bus platform, SDK, and monolith, enabling low-latency point-to-point communication across distributed services.
- Contributed to migration of 5 Apache Flink streaming jobs from Amazon Kinesis to Apache Kafka across 20+ production cells globally; implemented timestamp-based dual-source routing for zero-downtime, zero-duplication cutover.
- Built Claude/Copilot agentic skills to automate a production rollout across **195 file changes**, eliminating manual effort and creating a reusable deployment workflow for the team.
- Delivered the pre-placement talk at VIT and moderated a fireside chat with senior executives on AI innovation, demonstrating strong technical communication to diverse audiences.

Okta | *Software Engineering Intern, Data Platforms* — *Jan 2025 – Jul 2025* | Bengaluru, India
- Built Obscurify, a context-aware PII masking/unmasking microservice (FastAPI, self-hosted Mistral, Redis) using few-shot prompting; integrated Redis for stateful session management and load-tested with Locust, identifying LLM inference as the primary latency bottleneck.
- Optimized Snowflake query workloads and upgraded two Java microservices from Java 11 to Java 21 LTS, resolving active Spring Security CVEs.

IIT Madras | *Computer Vision Research Intern, Summer Fellowship* — *May 2024 – Sep 2024* | Chennai, India
- Enhanced the Generalizable NeRF Transformer (GNT) by integrating monocular depth estimation to provide geometric priors for multi-view scene reconstruction.
- Designed a transformation-based normalization pipeline to align dense and sparse depth data across views, improving depth consistency in novel view synthesis.
- Implemented custom PyTorch modules with multi-GPU training; achieved a **30–35% reduction in rendering time** with measurable PSNR/SSIM gains on standard benchmarks.

AlchemystAI | *Machine Learning Intern* — *Feb 2024 – May 2024* | Remote
- Designed an agentic workflow planner using LangGraph for dynamic task planning, execution, and automated replanning on failure; integrated LangChain and OpenAI Function Calling for structured data extraction within the pipeline.

Pi Datacenters | *AI Intern* — *Aug 2023 – Oct 2023* | Hyderabad, India
- Built RAG-based chatbots (LangChain, LangFlow, Pinecone, ChromaDB) for document Q&A, interview simulation, and enterprise support; developed a full-stack support agent (Flask) with semantic vector search and secure authentication.

Projects

Emotion-Aware Toxic Comment Detection | *DistilRoBERTa, PyTorch* — *Jul – Dec 2024*
Published: Leveraging Emotions for Enhanced Mental Health Prediction Using Machine Learning Algorithms — IEEE Xplore, ICCSP 2025
- Fine-tuned DistilRoBERTa augmented with six emotion features (sadness, joy, love, anger, fear, surprise) for binary toxicity classification; conducted ablation experiments measuring per-emotion contribution.
- Achieved **92% accuracy**, outperforming Naive Bayes, Random Forest, and LSTM baselines through emotion-aware contextual learning.
