Education

Georgia Institute of Technology — Atlanta, GA
M.S. in Computer Science, Specialization in Machine Learning — Aug 2026 – Dec 2027 (Expected)
Relevant Coursework: Machine Learning, Natural Language Processing

Vellore Institute of Technology — Vellore, India
B.Tech in Computer Science Engineering | CGPA: **9.60/10** — Sep 2021 – May 2025

Technical Skills

Languages: Java, Python, C++, C, SQL, JavaScript
Distributed Systems & Cloud: Apache Kafka, Apache Flink, AWS SQS, GCP Pub/Sub, Amazon Kinesis
Frameworks & Databases: FastAPI, Flask, PyTorch, Redis, Pinecone, ChromaDB
Tools: Git, Docker, REST APIs, Locust, Multi-GPU Training

Experience

Okta | Software Engineer I, Data Platforms — Aug 2025 – Jul 2026 | Bengaluru, India

- Enabled **low-latency, point-to-point messaging** across distributed services by implementing **AWS SQS and GCP Pub/Sub** as delivery options within the event delivery platform.
- Migrated **5 Flink production data pipelines across 20+ cells** from Amazon Kinesis to Apache Kafka, maintaining data quality with **zero downtime and zero duplicate events** through timestamp-based dual-source routing and controlled cutover logic.
- Analyzed throughput and latency data from GCP Managed Kafka benchmarks against a 1**00,000 events-per-minute production target**, generating capacity insights for the event platform.

Okta | Software Engineering Intern, Data Platforms — Jan 2025 – Jul 2025 | Bengaluru, India

- Delivered context-aware PII masking and unmasking by building an **LLM-powered model-serving microservice** with FastAPI, Vertex AI APIs, Redis, and few-shot prompting; identified LLM inference as the primary latency bottleneck through Locust load testing.
- Built a **structured evaluation dataset** and validated **PII masking accuracy across diverse entity types and edge cases**, improving confidence in the service before production use.
- Improved service security by upgrading **2 Java microservices** from Java 11 to Java 21 and resolving active **Spring Security CVEs**.

Indian Institute of Technology Madras | Computer Vision Research Intern — May 2024 – Sep 2024 | Chennai, India

- Improved multi-view scene reconstruction by modifying the **PyTorch**-based **Generalizable NeRF Transformer** to incorporate monocular-depth geometric priors.
- Increased depth consistency across novel views by designing a normalization pipeline that aligned dense monocular estimates with sparse multi-view depth.
- Reduced rendering time by **30–35%** while improving **PSNR and SSIM** on standard benchmarks by optimizing multi-GPU training and building a reproducible evaluation pipeline.

AlchemystAI | Machine Learning Intern — Feb 2024 – May 2024 | Remote

- Improved workflow resilience through **automated replanning** by building an agentic task planner with LangGraph and integrating LangChain and OpenAI Function Calling for structured extraction.

Pi Datacenters | AI Intern — Aug 2023 – Oct 2023 | Hyderabad, India

- Enabled semantic document Q&A, interview simulation, and enterprise support by developing **RAG applications** with LangChain, LangFlow, Pinecone, and ChromaDB.
- Delivered an authenticated support agent with **semantic vector retrieval** by integrating Flask with secure user access and retrieval-backed response generation.

Projects

Emotion-Aware Harmful Comment Classification for Mental Health Signals | DistilRoBERTa, PyTorch
First Author, IEEE ICCSP 2025 | Published Jun 2025

- Achieved a **0.92 F1-score and 0.95 poisonous-class recall** by fine-tuning DistilRoBERTa with early stopping on **27,292 comments** enriched with six emotion features.
- Outperformed Naive Bayes, Random Forest, and LSTM baselines by up to **3 F1 points** by combining contextual embeddings with BERT-derived emotion scores.
